

Channel steel is a long steel section with grooved section. It belongs to carbon structural steel for construction and machinery. It is a section steel with complex section, and its section shape is grooved. Channel steel is mainly used in building structure, curtain wall engineering, mechanical equipment and vehicle manufacturing, etc.

ALSO CAN SUPPLY FORKLIFT CHANNEL STEEL BAR.

Products	U Channel Steel
Grade	Q235B, Q345B, A36, A572 Gr50, S235JR, S355JR
Type	GB standard(10#-40#, 100*48mm--400*102mm) JIS standard(50*25mm--250*90mm)
Length	6m, 12m, Large quantity can be customized
Technique	Hot rolled
Application	Mainly used for building structure, vehicle manufacturing and other industrial structure, channel steel is often used with i beam.
